### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**DETAILED ACTION**

***Election/Restrictions***

Applicant's election without traverse of group II, claims 11-12 in the reply filed on 11/10/2009 is acknowledged.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 11-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hale (U.S Patent No. 3438381).

Hale discloses a method for reducing noxious ingredients (corresponding to the claimed "nicotine" and "tar" content) of the mainstream smoke of a tobacco product, the method comprising the step of passing a mainstream smoke of tobacco product through a filter of a smoking article (column 1, lines 10-42); wherein the filter has a viscous liquid composition containing a polysaccharide such as resins and gums of tree origin (corresponding to claimed gums of the instant application) and gelatins (column 2, lines 26-28 and claim 2). Hale discloses the viscous liquid having sufficient viscosity to remain within the filter in use yet having enough flow for filling in manufacture and the liquid maybe honey (column 1, lines 31-35) but does not expressly disclose the viscosity range of the viscous liquid. However, it would have been obvious to one of ordinary skill in the art that a viscous liquid like honey would have the viscosity around 2000 to 3000

centipoise (as evidenced by <http://www.research-equipment.com/viscosity%20chart.html>) overlapping with the claimed ranges of viscosity. Therefore, it would have been obvious to one of ordinary skilled in the art to pick the compositions overlapping the claimed viscosity.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Jany (U.S Patent No. 3256890)discloses a method for reducing the nicotine and tar content of the mainstream smoke of a tobacco product, the method comprising the step of passing a mainstream smoke of a tobacco product through a filter of a smoking article (column 1, lines 15-20, column 2, lines 12-14, lines 44-46 and 61-63). Jany does not expressly disclose the viscosity range of the fluid.
